Biofore Concept Car Digital User Interface / In-Vehicle-Infotainment system **Capacitive touch screen** Menu tree and the Main Activity Window (MAW)

The idea with the IVI middle screen was to have all of the most used functions always available and physically close to the user.

Functions like the Player- and Air conditioning controls were placed into the Main Activity Window, so that they were always available.

Main Activity Window (MAW) Navi Info station Time Navi Info station Time Fixed controls Depending on what you want to do in the UI the MAW changes it's contents. You have either the Menu layout with quick player and air conditioning controls, or a "QWERTY"-type keyboard layout visible.
